The following are the recommended cleaning frequency guidelines for immunization sites/clinics. This cleaning checklist would be used for a clinic that would open for the day. If the clinic is going to be open for a portion of the day, the schedule would be adapted to the number of hours it would be open.

These are minimum guidelines that should be followed. If a surface/item is visibly soiled or an area appears to be cluttered or dirty, it must be cleaned immediately.

Wet contact time is the amount of time that a disinfectant needs to stay on a surface/item in order to ensure it is effective. The wet contact time for the product being used must be followed to ensure appropriate cleaning and disinfection.

#### **Tier 1 Areas**

Tier 1 areas are considered non-clinical office and common space.

All tier 1 surfaces must be wiped down with an approved disinfectant product at the frequencies detailed in the following tables even if they appear clean to the eye.

Tier 1 - Area A: Washrooms

**Tier 1 - Area B**: Lounge, waiting and reception areas, entrances, exits, corridors, meeting and planning rooms, elevators, stairwells

**Tier 1 - Area C**: Offices, miscellaneous rooms/areas

**Tier 1 - Area D**: Kitchens, coffee stations, staff rooms

#### Tier 2 Areas

Tier 2 areas are considered medical/clinical space.

All tier 2 surfaces must be wiped down with an approved disinfectant product at the frequencies detailed in the following tables even if they appear clean to the eye.

**Tier 2 - Area A**: Vaccine administration area, examination/treatment rooms, vaccine draw up area, clinical supply storage (vaccines, immunization supplies, PPE)

Tier 2 - Area B: Washrooms

**Tier 2 - Area C**: Post-immunization recovery area, lounge, waiting and reception areas, meeting rooms

Public health reserves the right to test surfaces using an ATP testing method, black light test, or other applicable testing method at any time during the term of the contract to ensure cleaning is being completed per the terms of the contract.
