

**3.2M            Horizontal Alignment**

**3.2.4M            Development of Superelevation**

**3.2.4.5M            Superelevation Development: Design Domain General Application  
Heuristics**

The TAC Subsection **3.2.4.5** is applicable to the Department's highways with the following substitution.

4.        For curves without spirals, the superelevation runoff is applied over a distance equivalent to the spiral length. In this case, standard Department practice is to locate the superelevation runoff so that two-thirds ( $2/3$ ) of the runoff occurs on the tangent section approach and one-third ( $1/3$ ) occurs on the curve.
