Re Notice of Alteration to Evergreen Environmental Technologies Corporation Licence 2612RR. File 4914.00

Dear Ms. Tracy Braun;

In 2015 Evergreen Environmental Technologies Corporation approved a partnership with Southwest Regional Development Corporation of Maniota, Manitoba, and Celtic Power & Machining of Rapid City, Manitoba to hold a site demonstrations of household waste and other landfill waste materials in a gasification process. This request for Alteration to License # 2612RR was received May 20, 2015, with the expiration on March/16. In January 2016 Evergreen Environmental requested a year extension to Licence #2612RR, which was granted to March 31/17. In February/17 Evergreen Environmental requested a two year extension to Licence #2612RR, which was granted to March 31/19.

At this point funding has been granted through Green Municipal Fund. The gasifier is being designed and manufactured with engineering approvals from the outset. Celtic Power & Machining has retained the services of an experienced combustion engineer. This comes after a long search for a suitably experienced engineering service that has previous positive experience working with municipal waste. The engineering discovery phase will be complete within the next month. At that point hard drawings will be finalized and construction activities will resume. Celtic Power & Machining is working toward system trials beginning in June 2019 and fully expect that time line to be achievable. Evergreen Environmental Technologies Corporation would ask for an extension to the Notice of Alteration to Licence #2612RR be extended to March 31 2021.

I have attached the original addendum outlining the required information concerning the demonstration gasification process.

If you require further information please contact Dave MacDonald or Wendy MacLennan: Evergreen Environmental Technologies at [evergreentech@xplornet.ca](mailto:evergreentech@xplornet.ca) or phone 204-867-7161.

Yours truly

Monty Peckover  
Chairman of the Board  
Evergreen Environmental Technologies Corporation
