File No. 22E12

Environmental Approvals Branch
Manitoba Environment, Climate and Parks
Box 36, 14 Fultz Boulevard
Winnipeg MB R3Y 0L6

Attention: Eshetu Beshada,

**RE: STEPHENFIELD LAKE RESORT OWMS
 ALTERATION REQUEST**

We are hereby requesting alterations to the submitted Environmental Approval to allow the existing tanks to remain in place, to specify final equipment selection, and tank sizes per manufacturing increments.

These changes in brief include:

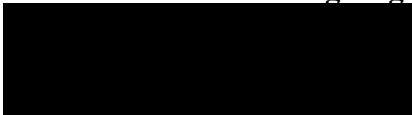

- 1) Leaving the existing tank train in place for emergency storage and shifting the proposed tank train easterly. The purpose of this request is to allow the tanks to be used for temporary storage prior to sewage being hauled off site both during the construction period and post construction should an emergency arise.
- 2) The Pump Manhole is proposed as a separate tank.
- 3) One shallow bury Switching Manhole will contain the pressure activated switching valves.
- 4) Orifice size increase in laterals to allow minimum 600mm squirt.

Revised drawings dated 2023 08 10 and a detailed summary of alterations from the original 2023 04 17 drawing issue date are attached.

If you require additional information, please contact the undersigned.

Yours truly,

STECKLEY Consulting Engineers Inc.

Kevin B Steckley, P.Eng.

Attach.
