Subject: Dike Alteration

Tracey,

This letter is to inform you of the minor alterations, the Village of Winnipegosis is proposing to do on a small portions of the dike walls, on the lagoon. The intent is to place first a geotextile material, then place riprap material on top of geotextile. Our riprap material would consist of 5" and down, blasted limestone.

There will be no disruption to any other part of the dike. The affected areas are close to the entrance and service road, so there will be a minimum of travelling on top of the dike.

We would like to start this project after we start our fall release, so that the water will be below our working area, and would like to be finished no later than the first of Nov.

I have provided some drawings of the affected areas, and a basic plan of what we intend to do. Also a picture of what the affected area looks like. I hope this will provide you with the necessary information.

If there is anything else that you would require, please contact me.

Regards,

Jim Lytwyn
